Sales Analysis

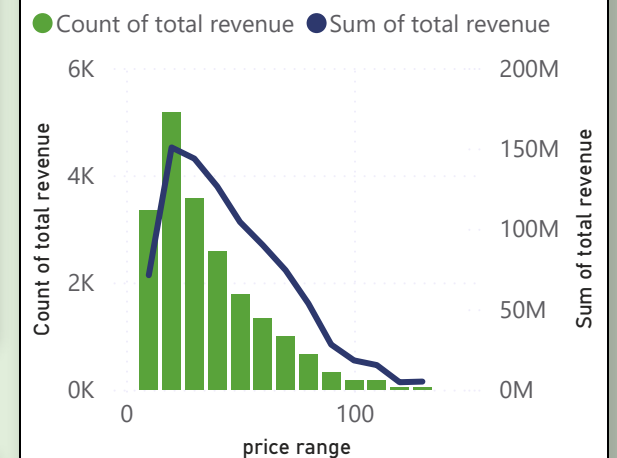

(a) Count of Product ID and Count of Product ID by price range

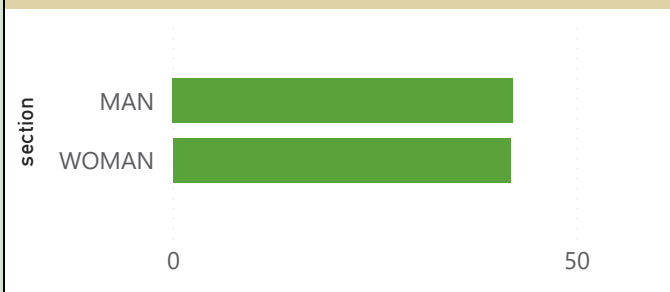

(b) Count of Product ID by price range

(c) Count of total revenue and Sum of total revenue by price range

(d) Average of price by section

(e) Average of price by Promotion

884.60M

Sum of total revenue

Insights

(a) Price range that concentrates most of Zara's products

Most products are concentrated in the \$20 to \$30 price range.

(b) Do higher-priced products sell proportionally fewer units

Yes, higher priced products sell proportionally fewer units. From the graph we can observe that higher priced products exhibit comparatively lower sales volumes, showing us the inverse relationship.

(c) Ideal price range that balances sales volume and total revenue

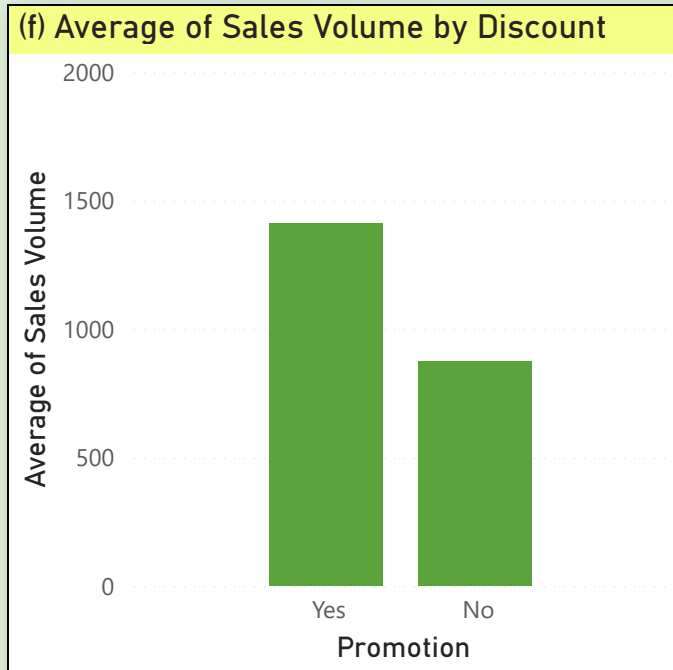

The \$20 to \$30 price range had sold approximately 5000 products and generates around \$1.51 billion in total revenue.

(d) Does the average price differ significantly between sections(MAN,WOMAN)

The difference is very small, indicating that pricing is largely similar across both sections no significant difference.

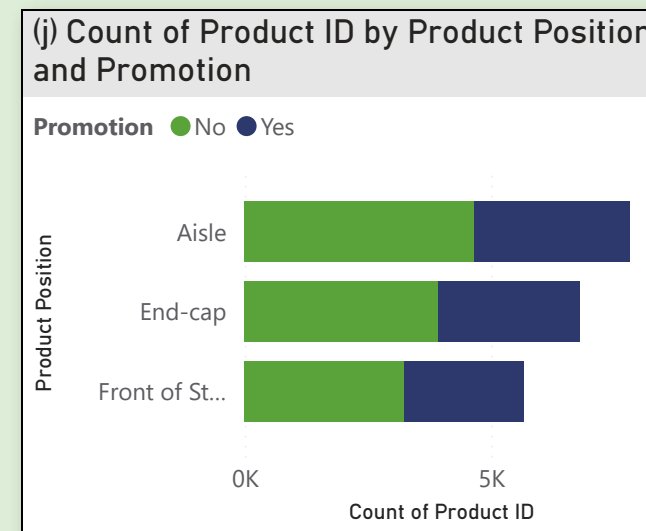

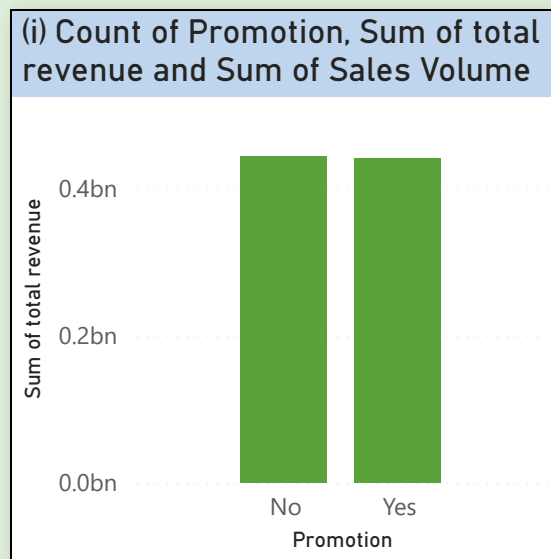

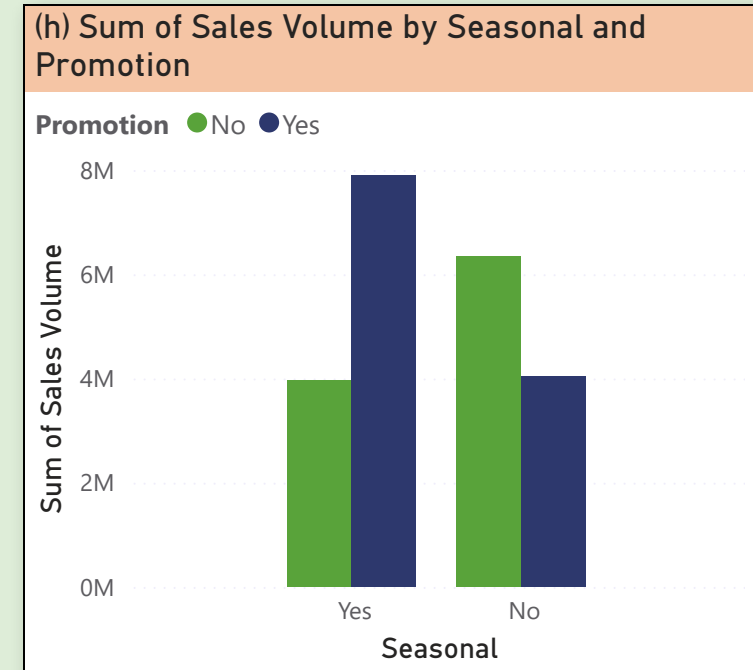

(e) Do discounted products significantly reduce their average price

Yes the discounted products has low average price of about \$6.18 than than other

(g) difference in sale volume between discounted and non discounted products

price range	No	Yes	Total
10.00	913.88	1490.54	1215.39
20.00	917.93	1463.83	1140.23
30.00	895.57	1419.20	1125.15
40.00	862.86	1394.86	1066.73
50.00	855.24	1346.61	1045.80
60.00	823.31	1309.71	1020.21
70.00	795.00	1267.54	968.42
80.00	781.04	1246.64	943.11
90.00	744.06	1188.95	855.61
100.00	775.63	1145.96	975.52
110.00	655.20	1232.33	712.59
120.00	714.52		714.52
130.00	709.83		709.83
Total	872.38	1412.33	1097.40

Insights

(f) Do discounted products have, on average, higher sales volumes

Yes discounted products shows higher average sales volume compared to non discounted ones, suggesting price reduction may have positive impact on sales.

(g) Is the difference in sales volume between discounted and non-discounted products greater within a specific price range

The difference in sales volume between discounted and non-discounted products varies across price ranges indicating that discounts are more effective in certain price (not uniformly effective).

(h) Do promotions affect seasonal products more than non-seasonal ones

Promotions have a stronger impact on seasonal products compared to non seasonal ones.

(i) Is there any relationship between the percentage of discounted products and total sales?

The total revenue generated by discounted and non discounted products is approximately equal

(j) Do discounted products appear more frequently in a specific Product Position (e.g., End-cap or Front of Store)

Discounted products appear most frequently in the Aisle
